

Feedback from Tradeshow Attendees:

- Change size of card (too much empty space)
- Add a text size limit (character limit) so the cards do not need the empty space
- The user's name in the header should lead to the dashboard not their profile
- The text message that is sent should probably include the driver's number or driver's details
- Google call to show location (ask Alish for help)
- Add address on card (on dashboard) so they can see the address before accepting request
- Increase the aesthetics:
 1. Animations (like on hover)
 2. Colours
- Deployment
- Add QR for website on flyer
- Different colours for different user types
- Volunteer background checks?
- Food quality checks?
- Create a sense of community -> distribution system (rate volunteers)
- Create incentive for businesses to donate (display their contribution on the webpage for all to see)
- At trade show have three designated roles each run through so users are not confused (but Tim preferred it the way we did it with just the three laptops)
- Have steps so people are less confused (work on the flow so it's easy for 1 person or 5 people)
- Cards too big (track on them, at least for volunteers)
- Prompts for account registration, deletion etc.
- Change/remove shadow
- Have mobile phones available on project day
- Advertising restaurants and how much they have contributed, social media
- Unsellable, unaesthetic food is often thrown out (even though it is perfectly edible)
- What are restaurants willing to do for advertisements
- What point/time of day the restaurant wants food to be picked up should be viewable (so they do not have to wait too long for shelters/volunteers)
- Ingredients may already be prepackaged
- Restaurants may have excess food only late at night so who will pick it up that late? Will the shelter be open?
- Unless you are allowing recurring pickups, do not allow them to set the year (maybe only allow them to select 1-3 days in advance because food will go bad if not picked up in a few days)
- Advertising their use of our systems may provide incentive to restaurants

- What if a volunteer commits but does not pick it up?
- How will we deal with flakey volunteers?
- Maybe implement a praise system for volunteers (like airbnb)
- Have signifiers for different roles on the web applications visible (maybe icons, colours, etc)
- Prompt to remind the driver to update status on homepage
- Delivery? Distribution networks
- Volunteers could get some training from the government
- Food safety
- What about individuals wanting food
